Recent Larger Projects

1. Signal Secure: A device for cars. The idea of this product was to collect data like gps, elevation, car & engine status and also to remote control things like windows, engine, etc. This was a global deployed project involving things like distributed databases, processing global telemetry and strategies for condensing big data, network switching, etc.
2. Signal Secure: An "Amazon Go" like project. This project was a POS system with so called smart-carts and considered as a pilot project for a major US retailer. This system was a globally deployed POS with many brick and mortar outlets distributed over many countries in the US \ LATAM area. Responsible for the software development, including some firmware.

Acquired Skills:

- Team lead / Product manager, code reviews, responsible for deliveries.
 - Developing requirements (technical, employee) for upper management
 - Document features & specifications, Milestones, (employee) requirements
